

USAID Research and Innovation Fellowships @ ASU

Arizona State is among six universities chosen to partner with the Global Development Lab of the U.S. Agency for International Development. Through this partnership, ASU graduate students are eligible for Research and Innovation Fellowships that foster global collaboration, advance use-inspired research and improve lives.

Planting the seeds of sustainable development

Research and Innovation Fellowships are available to top-tier master's and doctoral students and are located in Brazil, Colombia, India, Indonesia, the Philippines, Senegal and South Africa. Prospective fellows find projects that suit their interests by browsing an extensive catalog. Upwards of 400 projects span disciplines such as biological sciences, chemistry, computer sciences, engineering, geosciences, materials research, mathematics, physics and astronomy, social sciences and sustainability.

This variety allows students to leverage their specific area of expertise in the cultivation of solutions to complex development challenges.

An international expanse of opportunity

Our goal is to build an equitable, participatory and inclusive research framework that serves as a model for the global community and strengthens human networks.

While adding value to student experiences and connecting ASU's knowledge to areas where it is needed most, Research and Innovation Fellowships present rich opportunities for public-private sector partnerships. Such partnerships improve the ability of U.S. companies to expand existing markets and establish new ones - notable advantages in our hyper-connected world economy.
